Experience

Insurity

Oct 2025 – Present

AI Solution Analyst

- Built full-stack features with Angular and .NET, and implemented semantic retrieval with PostgreSQL (pgvector) to support LLM-powered search and Q&A across **1,200+ internal documents** used by **4 internal teams**.
- Develop and validate system logic, workflow execution paths, and generated outputs; supported **50+ workflow and output changes** across **3 environments** and resolved **20+ implementation and debugging issues** through log tracing, API response analysis, and end-to-end troubleshooting.
- Improved release reliability by resolving environment-specific configuration and dependency issues across **4 Azure DevOps pipelines**, reducing failed builds and deployment interruptions.
- Promoted from **AI Developer Intern** into a full-time technical role after contributing backend workflow logic, API-driven system behavior, and production software enhancements across insurance platforms.

The Net VR

Aug 2025 – Oct 2025

Software Engineering Intern

- Shipped cross-platform VR and mobile features in Unity (C#) and React Native for a closed beta of **1K+ users**, iterating from telemetry and feedback to improve performance and UX.
- Built an AI Companion service with Flask REST APIs, NoSQL, and a WebSocket bridge, processing **5K+ real-time assistant requests** during beta testing.
- Dockerized backend services into microservices, standardized local environments and CI checks, and optimized Unity frame timing with object pooling and async I/O, cutting integration time from days to hours and reducing latency by **15%**.

Projects

Richish: Net Worth Tracker | *App Store*

SwiftUI | StoreKit | Cloudflare Workers

- Designed and shipped a privacy-first iOS wealth tracker to the **App Store** using SwiftUI and StoreKit, reaching **500+ downloads** and a **5-star rating**.
- Built CSV import, transaction and holdings pipelines, and centralized net-worth calculations for locally stored financial data; reduced external market-data API calls through a Cloudflare Worker caching layer.

Safety Guardian | *Source Code*

AWS Kinesis | Glue | Redshift

- Built a CI/CD-backed hazard event pipeline with **75% test coverage** that processed **10K+ hazard events daily** in near real time using AWS Kinesis, Glue, and Redshift.

Operational Dashboard for Small Businesses | *Source Code*

ReactJS | Spring Boot | PostgreSQL

- Built a full-stack sales analytics dashboard with ReactJS, Spring Boot, and PostgreSQL to process business sales data and generate 30-day forecasts, improving trend-detection accuracy by **25%**.

Education

Arizona State University

Dec 2026

Master of Computer Science, Big Data Systems

- Accelerated 3.5 + 1 concurrent program; graduate coursework includes Agentic AI, Mobile Computing, Engineering Blockchain Applications, Data Mining, and Data Visualization.

Arizona State University

Dec 2025

Bachelor of Computer Science

- Dean's List — **GPA: 3.74**

Technical Skills

Languages: Python, SQL, TypeScript/JavaScript, Java, Swift, C#

Frameworks / Platforms: React, Angular, .NET, Spring Boot, Flask, SwiftUI, React Native, Unity

AI / Data: PostgreSQL, pgvector, vector search, semantic retrieval, LLM applications, embeddings, Redshift, Glue, Kinesis

Cloud / DevOps / Tools: AWS, Docker, Azure DevOps, Git, CI/CD, Cloudflare Workers, Postman, REST APIs, WebSockets, NoSQL, Microservices, Xcode
